## EDUCATION

### Georgia Institute of Technology

Bachelor of Science Degree in Computer Science, GPA: 3.88

Atlanta, Georgia

Expected Graduation: May 2025

## EXPERIENCE

### HP Inc.

Software Engineer Intern

Fort Collins, CO

May 2023 – Present

- Implementing a browsable graph visualization, enabling users to seamlessly comprehend the intricate relationships among 100,000+ HP-related API entities spanning across 15 distinct types
- Integrating the graph into the global hp.dev catalog site, delivering significant time savings for 8,000+ employees by eliminating the need for manual searches of entity relations across multiple catalogs
- Utilizing React, Typescript, and Highcharts for the dynamic UI and employed GraphQL to query data from HP's API Catalog backend

### Georgia Tech's Vertically Integrated Project Program

Atlanta, GA

Research Assistant

January 2022 – December 2022

- Applied TensorFlow, NumPy, and OpenCV to an advanced AI-based face recognition algorithm for miniature robotic blimps and autonomous underwater vehicles
- Constructed robust RESTful APIs using Go and Spring Boot, streamlining the request/response format for NCR consumer data
- Incorporated a Raspberry Pi in the blimp, providing data parsing from the facial recognition and secure uploading onto an SSH server
- Created a Python to MATLAB GUI that applied deep learning to improve a blimp pathfinding by 30% in terms of image quality and accuracy detection
- Facilitated with eight teammates to deploy a blimp that successfully broadcasted a Georgia Tech basketball game to 1,000+ people

### NCR Corporation

Atlanta, GA

Software Engineer Intern

May 2022 – August 2022

- Streamlined the request/response format for NCR consumer data by building robust RESTful APIs using Go and Spring Boot
- Developed an intuitive RBAC configuration dashboard for NCR's Business Platform in Next.js to display and manage GraphQL API from over 60 million calls made by 100+ partner organizations
- Empowered users to edit 50+ templates from NCR's Digital Receipt services by integrating an HTML viewer onto the dashboard
- Employed Chart.js to visualize data for top 10 organizations, enterprise units, and endpoints, allowing effective performance assessment
- Ensured seamless integration and optimal site performance of the site by assisting in its deployment onto the Google Cloud Platform with GitOps

### UGA's Computer Science Department

Athens, GA

Teaching Assistant

June 2021 – December 2021

- Delivered in-depth feedback on weekly Java labs, guiding ~110 students in mastering core programming concepts over two semester
- Contributed to 12 Java assignment evaluation tools, significantly reducing grading time of student submissions to under 5 seconds

## PROJECTS

### NCR Go | React Native, MongoDB, Python, Microsoft Azure

[github.com/RiRah123/NCR-Go](https://github.com/RiRah123/NCR-Go)

- Spearheaded the development of a React Native application with six teammates that leverages computer vision technology to revolutionize the shopping experience by accurately detecting product availability and providing in-store location information
- Connected a neural network into the front end of the application, optimizing classification of in-store product images to ~94% accuracy and organizing inventory data in a MongoDB cluster
- Recognized as top 10 of 401 teams for NCR's Global Hackathon and secured a patent by presenting to the Executive Leadership Team

### mfChess | React, TypeScript, MongoDB, Google Authenticator

[github.com/mfChess](https://github.com/mfChess)

- Collaborated with four teammates to devise mfChess, a deployed React application that improves the user experience in online chess by implementing faster matchmaking, real-time, in-depth Stockfish-powered analysis, and game-hosting capabilities for 10+ players
- Connected a neural network into the front end of the application, optimizing classification of in-store product images to ~94% accuracy and organizing inventory data in a MongoDB cluster

### EatCode | React, MongoDB, Express.js, TypeScript, Java, Python, Docker

[github.com/RiRah123/EatCode](https://github.com/RiRah123/EatCode)

- Engaged with seven teammates to build a software engineering technical interview training website in React, enabling users to enhance their data structures and algorithms learning experience with 100+ questions in 5 supported programming languages
- Configured a MongoDB and Express.js backend system, tracking users' progress on problem-solving over the last 365+ days using their Google account ID

## TECHNICAL SKILLS

**Languages:** Java, Python, C/C++, JavaScript, TypeScript, HTML/CSS, SQL, GraphQL

**Frameworks/Libraries:** React, Material UI, Next.js, React Native, D3.js, Spring Boot, NumPy, Pandas, PyTorch, Matplotlib

**Developer Tools:** Jira, Azure, Docker, AWS, Postman, Figma, Terminal, Git, GitHub, Docker, JUnit, Kubernetes, Helm, MongoDB

**Concepts:** Agile Development Process, Data Structures & Algorithms, RESTful APIs, Human-Computer Interaction, UI Design, Data Visualization, Software Development, Object-oriented Programming, Artificial Intelligence, Cloud Computing, Computer Architecture
